Larger Capacity Screening For crowd based temperature measurement systems also available.

Signage Branding Physical and Digital Signage for "Back to Business"

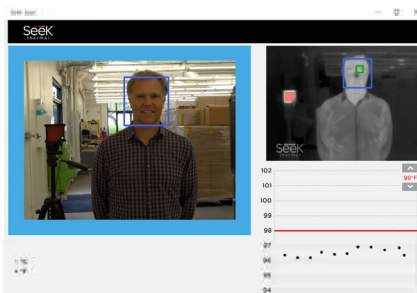

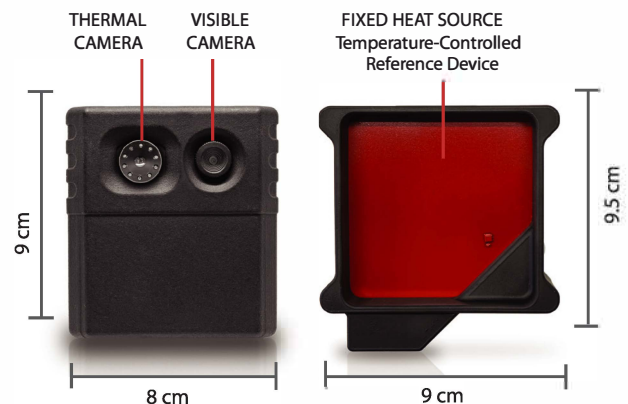

Rentals Available For your personal, family and light gatherings as executive orders are loosened.

Seek Scan™ is a simple, low cost, thermal imaging system designed to automate body temperature screening using skin temperature as a proxy. Unlike traditional screening methods that require people and contact, Seek Scan enables social distancing, self-measurement and finds the most reliable spot on the face for temperature measurement.

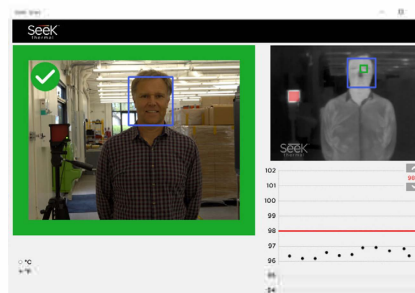

The Seek Scan process provides an additional layer of preventive screening and delivers more peace of mind to businesses and institutions and comfort to participants and your clients. Seek Scan provides a log of readings taken.

Made in USA with global components.
