

INDUSTRY-LEADING SAN WITH THE BENEFITS OF NAS

Storage Center with NAS is a fully integrated SAN and NAS platform that extends the benefit of storage consolidation across the enterprise. This unified block and file-level solution delivers heterogeneous file sharing, high availability, unlimited scalability and end-to-end support.

Integrated Enterprise Storage Features

Automated Tiered Storage

Automatically store both block and file-level data on the preferred tier of storage and cut overall storage expenditures.

Thin Provisioning

Take advantage of a high storage utilization rate with thin provisioned volumes.

Successive Snapshots

Create a high number of Replays (snapshots) to allow speedy recovery to servers.

Thin Replication

Setup remote replication in 6 clicks to provide disaster recovery for both block and file data.

Cut Cost and Complexity

Storage Consolidation Lowers TCO

Reduce overall server hardware, management overhead and associated IT staff costs with a consolidated solution. Cut connectivity costs by connecting to the SAN via Ethernet instead of costly Fibre Channel HBAs.

Implement In Minutes, Reduce Power and Cooling

Plug and play solution delivers heterogeneous file sharing and increased client access. Storage Center with NAS is deployed as a diskless server and booted from centralized disks on the Compellent SAN to further simplify management, cut power and cooling requirements and reduce acquisition costs.

Advanced NAS Features Simplify Management

Built-in support for NFS and CIFS delivers multi-platform file sharing. File-level de-duplication via single instance storage (SIS), embedded MPIO and VDS Manager simplify overall management.

Reduce the Cost of Downtime

Create more recovery points to ensure rapid recovery. Fault tolerance and clustering support for up to 16 nodes deliver high availability. Single contact point for service of entire end-to-end solution lowers management cost and complexity.
